

I am opposed to Broadband Over Power Line (BPL) being implemented in the HF spectrum due to the great interference issues associated with it.

As a long time shortwave listener and amateur radio operator I see this as an end to HF spectrum usability as we now know it.

Furthermore I see it as a potential source of global interference to other nations as well.

I feel that BPL should only be implemented in the microwave spectrum and not in the HF and VHF ranges due to propagation.

Thank you,

Harry L. Yingst III
